Art Unit: 2822

This Office Action is in response to the papers filed on December 16, 2003.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-14, drawn to a semiconductor substrate, classified in class 257, subclass 316.
- II. Claims 15-16, drawn to a method of making a semiconductor device, classified in class 438, subclass 257.

The inventions are distinct, each from the other because:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process, such as by forming a polycrystalline semiconductor layer over a semiconductor substrate, implanting oxygen into the layer/substrate interface, annealing to form an oxide insulating layer between the layer and substrate, and forming the memory transistor in the thus insulated polycrystalline layer.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
